

# CARIBAEA INITIATIVE

— Special **SYMPOSIUM** —  
& training **WORKSHOP** 2026

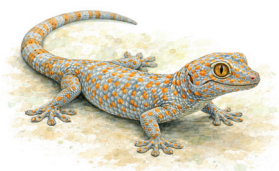

Study and management of terrestrial invasive vertebrates  
in the insular Caribbean

**16-18 JUNE 2026**

**LE GOSIER, GUADELOUPE**

Three days of scientific exchange and regional cooperation  
to address a major biodiversity challenge in the Caribbean.

## EVENT OVERVIEW

**The insular Caribbean is a major biodiversity hotspot but is highly vulnerable to biological invasions, particularly by terrestrial vertebrates, which remain understudied and difficult to manage.**

In this context, Caribaea Initiative will host a major event bringing together researchers, protected area managers and conservation practitioners from across the Caribbean and beyond.

The event aims to strengthen regional research capacity, encourage experience sharing, and foster scientific and technical cooperation between Caribbean territories.

### **The programme will combine**

- Scientific presentations and plenary lectures
- Training sessions on tools and methodologies
- Round-table discussions on ethics, policy and regional cooperation

## Call for abstracts

Present your research on invasive terrestrial vertebrates to an international audience of researchers and conservation practitioners!

## Information & registration

Early bird registration fees:

- **Standard:** 360 €
- **Student:** 230 €

### **Secure your spot!**

Registration opens on January 15. Early bird rates available until April 30.
